Agile, flexible, resilient — today’s supply chains must be all this and more to be able to adapt to changes over which they have no control, such as natural disasters, political instability, regulation and dramatic economic changes. Add to that the pressures of delivering in a digital-first economy and rapidly changing market dynamics and supply chain leaders have their work cut out for them.

**THE NEXT GENERATION OF SUPPLY CHAIN MANAGEMENT**

GEP NEXXE™ is an end-to-end supply chain management software solution that is designed to deal with the supply chains of today and the future.

A cloud-native, AI-powered, data-centric platform, GEP NEXXE works seamlessly with GEP SMART™ to provide you with the world’s only end-to-end supply chain and source-to-pay software in one complete solution.

Driven by rapid technological advances, every link in the modern-day supply chain generates a constant stream of data that is often too much for traditional supply chain models and old-school legacy systems to handle. GEP NEXXE is built on the floating foundation of a self-cleansing data lake, which feeds off these streams of data from every stage in the supply chain.

GEP MINERVA™, our proprietary artificial intelligence technology, resides natively within every function and feature of GEP NEXXE. This enables you to manage every aspect of a global, complex supply chain, no matter how massive or minimal.
Decentralization, disruption, and digitalization are the three forces that continue to shape 21st century supply chains. Suppliers, logistics partners, production facilities, wholesalers and retailers come with their own data and ERP, which create an unwieldy data-overload environment.

GEP NEXXE™ is a cloud-native solution that plugs-and-plays effortlessly into your existing legacy system to extract the vast streams of data coming out of your supply chain and send it all to a safe repository where it’s collated, cleaned and categorized.

The foundation of GEP NEXXE is our data lake, which lives natively in the cloud and always has space for more. The data lake is self-cleaning, sorting out and meticulously arranging all data and metadata, eliminating duplicates and sorting multiple entries into one.

The vast collection of data and metadata present in the lake enables GEP MINERVA™ to find patterns, insights and analyses that empower you with quick, accurate and meaningful business results.

Named after the Roman goddess of wisdom, strategy and trade, GEP MINERVA is our proprietary artificial intelligence technology that is embedded at the heart of all of our software solutions. A matrix of cutting-edge AI technologies, GEP MINERVA optimizes and transforms business operations.

GEP MINERVA’s vast array of features, from predictive analytics, cognitive capabilities, data normalization, conversational user experiences, human-in-the-loop learning and decision support tools empowers your organization with unprecedented competitive advantages.

“GEP combines supply chain acumen with deep knowledge of industry-specific procurement practices and suppliers, reflecting its strong sourcing and procurement heritage. This places GEP in a unique position to help clients balance opportunity with risk as they evaluate, rationalize, and optimize their supplier ecosystems.”

– ALM Intelligence
CONTROL TOWER

User-first is one of the guiding philosophies behind GEP NEXXE and it shows in the intuitive, easy-to-understand and easier-to-use interface. Log in and start working without the need for specialized consultants or external IT crews.

Gain total visibility across your entire supply chain from one place. The control tower is your one-stop window into every link in your supply chain. GEP NEXXE features state-of-the-art tools that allow you to collaborate with every stakeholder in your organization, maximize visibility with real-time status reports and updates, and action AI-powered insights with improved planning and productivity.

THE GEP NEXXE ADVANTAGE

Made by supply chain professionals for supply chain professionals, GEP NEXXE seamlessly fits in with any ERP system to provide you with a whole host of functions across supply chain collaboration, visibility and execution, and planning.

OPTIMIZE OPERATIONS WITH END-TO-END SUPPLY CHAIN VISIBILITY AND EXECUTION

GEP NEXXE offers a complete, end-to-end view of your logistics, inventory and warehouse management processes and people in real time. Take advantage of low-touch mobile-enabled transactions for warehouses and logistics to gain visibility into inventory across all locations and with all trading partners. From air freight and shipping cargo all the way down to the exact bin level in the warehouse, leverage total visibility into shipments and inventory on the move.
BOOST COMMUNICATION WITH REAL-TIME MULTI-TIER SUPPLY CHAIN COLLABORATION

Enable real-time collaboration with your supply chain partners to balance supply and demand and ensure accurate and timely delivery. GEP NEXXE™ leverages advanced AI, analytics and machine learning to improve collaboration, drive action-oriented resolution and boost profitability. Integrate advanced technology to ensure cross-organizational collaboration, enabling engagement with multiple tiers of suppliers and customers on a wide range of supply chain processes.

MAXIMIZE BUSINESS RESULTS WITH WORLD-CLASS SUPPLY CHAIN PLANNING

GEP NEXXE offers best-in-class, collaborative supply chain planning tools that generate goal-optimized plans to maximize business outcomes such as profitability and customer satisfaction. Taking real-time supply chain data from multiple partners, GEP NEXXE’s supply chain planning suite aligns with your demand, supply and logistics goals and creates actionable strategies to drive tangible business growth.
